

Official Gazette for Published Utility Model Applications

Published Utility Model Application: S54-99241

Publication date: July 13, 1979

Device Name: Seat back for vehicle that puts out cool air and warm air

Abstract [as abstracted by translator]: This device divides the air coming from a guide tube into three parts on the lower part of the seat back and one above. The one at the top is further divided into two branches to blow air on the seam in the driver's back. The lower three are also divided in two or three parts in a similar manner. The openings are formed into nozzles.
